ullet Please complete the following definition: a relation \sim on a set S is an equivalence relation if

• Let S be the set of all current UAlbany students. For $x, y \in S$ define $x \sim y$ if and only if there is at least one course this semester in which both x and y are enrolled. Is it true or false that \sim is an equivalence relation on S? State explicitly which axioms hold and which ones (if any) fail.
