This questionnaire asks about whether your child who is enrolled in the Upstate KIDS Program has ever been vaccinated to protect against the H1N1 virus ("Swine Flu"). Please note this questionnaire is not asking about whether your child has received other types of influenza vaccinations other than H1N1. For example, we're not asking about whether your child received the seasonal flu vaccine.

**NOTE:** If you have children from more than one birth who are enrolled in Upstate KIDS, we will send a separate H1N1 questionnaire to you with each of your enrolled child's age-appropriate screening packets.

1. Has your child ever been vaccinated for the H1N1 virus?

- [ ] Yes; PROCEED TO QUESTION #2
- [ ] No;

   If no, please tell us why your child was not vaccinated for H1N1 (mark all that apply using an 'X')

   - [ ] Personal choice
   - [ ] Cost
   - [ ] Lack of availability
   - [ ] I don't know what H1N1 is

2. If your child has been vaccinated for the H1N1 virus please mark an 'X' below for each vaccination your child received and tell us the date the vaccination was received. If your child received more than one H1N1 shot, please use the boxes below to tell us about all of the vaccinations received. Some doctors recommend that children be given Acetaminophen (such as Tylenol®) or Ibuprofen (such as Motrin® or Advil®) when they are vaccinated for H1N1. For each H1N1 vaccination your child received, please let us know if Acetaminophen or Ibuprofen was given for the vaccination.

   - Shot #1
     - [ ] Acetaminophen or Ibuprofen given

   - Shot #2
     - [ ] Acetaminophen or Ibuprofen given
