

Dear Colleagues,

We are pleased to announce the 2nd International Conference on Vibrational Optical Activity (VOA) and Bio-Medical Applications of Raman Spectroscopy will take place at the University at Albany, State University of New York, on August 5-7, 2010. This Symposium is a satellite meeting preceding the XXII International Conference on Raman Spectroscopy (ICORS 2010) to be held in Boston, MA, USA, August 8-13, 2010. The Symposium format will be two 'separate' conferences, where some shared time will be devoted to overlap in the area of Biological Vibrational Optical Activity. The combined format will also share poster-session and exhibitor-display space. But each conference will have its own identity - The VOA conference will showcase the leading-edge research and applications in the field of ROA and VCD, including experimental and theoretical advances. At the Biomedical conference, in addition to lectures given by Raman spectroscopists, a leading medical doctor will give a plenary lecture and facilitate panel discussions to identify the foremost problems in medicine for the coming decade or more for which research in vibrational spectroscopy, Raman and infrared, can have a significant impact. For more information go to the conference website:

We certainly hope that you will be interested in attending 2nd International Conference on Vibrational Optical Activity and Bio-Medical Applications of Raman Spectroscopy.

With best regard,

Igor Lednev
