A Research Project Assistant is needed to support the administration of the Albany Infant and Mother Study (AIMS). AIMS is a prospective cohort study of pregnant women and their babies designed to examine the relationship between a range of prenatal psychosocial and environmental exposures with infant health, as well as understand the associated biologic and epigenetic mechanisms. The Research Project Assistant will perform all essential duties to carry out the Albany Infant and Mother Study. These duties include recruiting participants, verifying study eligibility, administering informed consent, administering questionnaires, database management, and the coordination of study operations. The Research Project Assistant will also assist in data analyses, IRB applications, and manuscript preparation. Preferred candidates will have experience in maternal and child health populations, recruiting study participants, and working in a clinical setting. Field placement and internship credit are available for this position. Tentative start date is August 29.
