Computer-Assisted Therapy for Children with Autism Spectrum Disorder and Anxiety

Program Eligibility Requirements
Participants must:

- Be between the ages of 7—13
- Have an ASD diagnosis
- Have symptoms of anxiety
- Have a caregiver willing to bring the child to therapy sessions
- Be willing to complete brief research-based assessments

Opportunity to participate in research:
The Camp Cope-a-Lot intervention is being offered at **no cost** as part of a research study being conducted through the Center for Autism and Related Disabilities at the University at Albany. This program provides cognitive behavioral intervention using a computer-assisted program and the supervision of a therapists who are either licensed clinical psychologists or doctoral students in clinical psychology. Participants and their parents are asked to complete research assessments in order for us to evaluate the effectiveness of the intervention.
