Many individuals with ASD struggle academically regardless of cognitive and language assessment findings. Academic deficits and the frustration and anxiety produced by these deficits often result in individuals avoiding school, shutting down, and/or demonstrating challenging behaviors as well as experiencing a loss of self-esteem and/or self-determination. In this seminar, participants will learn how the characteristics of ASD may impact academic achievement and progress. Additionally, participants will learn how to develop strategies and interventions to support children with ASD achieve academic success.
