Last semester's Map Room talk was such a great success that EAP asked Ross Lazear from the Dept. of Atmospheric & Environmental Sciences to provide employees with another chance to learn about the weather scene here at UAlbany!

As the public knows all too well, forecasting the weather can be quite a challenge. This is especially true for us in Albany, since our weather is closely tied to topography, the Atlantic Ocean, and nearby Great Lakes. In this session, we will learn how meteorologists make short, medium, and long-range forecasts by looking at some of the weather models and other data that go into making a forecast. A forecast of the upcoming weather will conclude the discussion. You won't want to miss this opportunity!

**Wednesday, February 29
12:00 - 1:00 pm
Earth Science Bldg.
Room 333**
