

County Health Rankings

Mobilizing Action Toward Community Health

Bridget Booske, PhD, MHSA
May 4, 2010

Rankings are everywhere

Internet Dating Rankings - U.S.A.
Hitwise ~ 3/10

- 1 Plentyoffish
- 2 Singlesnet
- 3 Match
- 4 Yahoo Personals

Why Rank?

- Allows comparison of one or more attributes for a select group of entities—hospitals, counties, law schools, etc.
- Rankings reduce data to a form that consumers and policy-makers can easily use
- Rankings draw attention and can be used to
 - help target interventions and funding
 - help select high-performers (schools, hospitals, clinics, healthy places to live)
 - reward high-ranking entities and penalize low-ranking ones

County Health Rankings

Mobilizing Action Toward Community Health

- Where we live matters to our health.
- One of the greatest disparities in this country is that some places are healthy, but others are not.
- There is relatively little discussion about these disparities by the public or policy makers.

Background Methods Results Discussion & Conclusions

America's Health Rankings

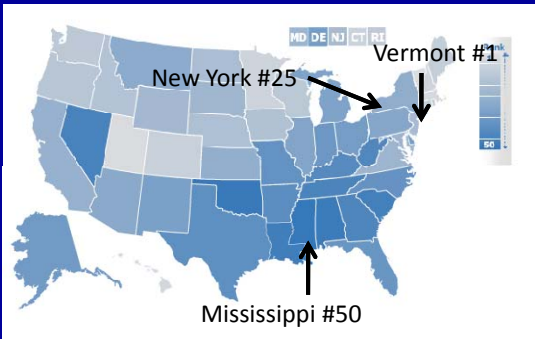

- Ranks the overall health of all 50 states, from healthiest to least healthy.
- First published in 1990 and annually thereafter.
- Uses a model that summarizes the overall health of each state.

America's Health Ranking – 2009

Background Methods Results Discussion & Conclusions

Response to America's Health Rankings

- Interest in the media and among policy makers for the past 20 years
- Provides model to summarize the health of an entire state
- But just as “all politics is local” so is public health
- We decided to adapt this model for Wisconsin

Background Methods Results Discussion & Conclusions

Wisconsin County Health Rankings

- Published annually since 2003
- Ranks health in all 72 counties

Background Methods Results Discussion & Conclusions

The MATCH Project and the County Health Rankings

- The Wisconsin MATCH Team
 - Including Pat Remington, Jessica Athens, Julie Willems Van Dijk, Dave Kindig
- Robert Wood Johnson Foundation
 - Including Brenda Henry, Michelle Larkin, Jim Marks, Joe Marx, Pamela Russo
- Our Partners
 - Including CDC, NCHS, ASTHO, NACCHO, NNPHI, Dartmouth Institute, 11-member Metrics Advisory Group

Background Methods Results Discussion & Conclusions

What is unique about the County Health Rankings?

- Provides a measure of the overall health of each county in the United States
- Each county:
 - gets a snapshot of their overall health and the factors that influence their health
 - is able to see how its health compares to that of other counties so they can see where they are doing well and where they could improve

Background Methods Results Discussion & Conclusions

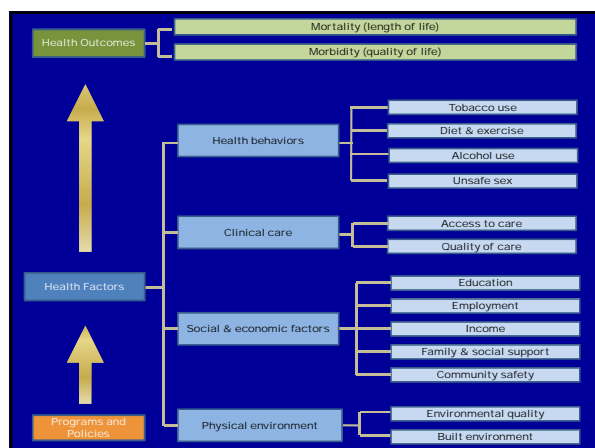

METHODS

1. Identify model
2. Collect data
3. Create summary measures
 - Standardize measures
 - Assign weights
4. Rank summary measures & communicate results

Background Methods Results Discussion & Conclusions

Background Methods Results Discussion & Conclusions

Collect the Data

- Available
 - Free or low cost
 - Publicly accessible
 - All or most counties
- Timely—preferably updated annually
- Consistently collected over time
- Valid and reliable
- Reflect an important—and modifiable—aspect of population health

Background Methods Results Discussion & Conclusions

| Data Sources |
|--|
| Behavioral Risk Factor Surveillance System |
| Census County and Zip Code Business Patterns |
| CDC-Environmental Protection Agency Collaboration |
| Dartmouth Atlas Project, Medicare Claims Data |
| Decennial Census and American Community Survey, CPS |
| FBI, Uniform Crime Reporting |
| HRSA, Area Resource File |
| National Center for Education Statistics |
| National Center for Hepatitis, HIV, STD, and TB, CDC |
| Vital Statistics, National Center for Health Statistics, CDC |
| Small Area Income and Poverty Estimates |
| US Bureau of Labor Statistics |

Background Methods Results Discussion & Conclusions

Standardize Each Measure

- Calculate z-scores:

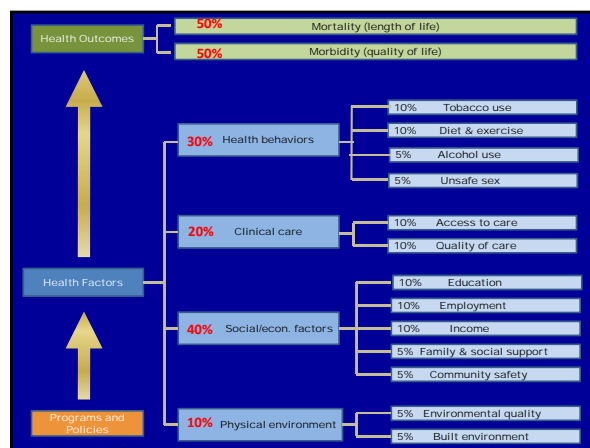

$$\frac{\text{Measure} - \text{Mean of counties in state}}{\text{Standard deviation}}$$
- Truncate z-scores $> |3.0|$ for counties with populations $< 20,000$

Background Methods Results Discussion & Conclusions

Assign weights to create summary measures

- Weights can be determined using multiple strategies
 - Historical perspective
 - Review of the literature
 - Weighting schemes used by other rankings
 - Analytic approach
 - Pragmatic approach
- The *County Health Rankings* considered all of the above to generate a weighting scheme

Snapshot 2010: Albany

| | Albany County | Error Margin | Target Value* | New York | Rank (of 62) |
|--|---------------|--------------|---------------|----------|--------------|
| Health Outcomes | | | | | 27 |
| Mortality | | | | | 36 |
| Premature death | 6,453 | 6,122-6,785 | 5,034 | 6,099 | |
| Morbidity | | | | | 18 |
| Poor Health Factors | | | | | 12 |
| Poor Health Behaviors | | | | | 22 |
| Poor Adult smoking | 22% | 19-25% | 15% | 20% | |
| Low Adult obesity | | | | | 4 |
| Low Clinical Care | | | | | |
| Highly Uninsured adults | 14% | 12-16% | 12% | 15% | |
| High Social & Economic Factors | | | | | 16 |
| High Motor vehicle | | | | | |
| High Primary | | | | | |
| High High school graduation | 74% | 35-38% | 84% | 67% | |
| High Chronic disease | 36% | 35-38% | 36% | 31% | |
| High Teen birth | 9% | 5-9% | 5% | 5% | |
| High Physical Environment | | | | | 57 |
| High Air pollution-particulate matter days | 4 | | 0 | 2 | |
| High Air pollution-ozone days | 6 | | 1 | 5 | |
| High Access to healthy foods | 26% | | 71% | 43% | |
| High Liquor store density | 1.8 | | | 1.2 | |

Health Outcome Disparities

*Median of 50 healthiest vs. least healthy counties

| | Least Healthy | Healthiest | Ratio |
|-------------------------------------|---------------|------------|------------|
| Premature death rate | 12,368 | 4,904 | 2.5 |
| Self-reported health (fair or poor) | 20% | 9.5% | 2.1 |

Background Methods Results Discussion & Conclusions

Health Factor Disparities

*Median of 50 healthiest vs. least healthy counties

| | Least Healthy | Healthiest | Ratio |
|----------------------------|---------------|------------|------------|
| Adult smoking | 26% | 16% | 1.6 |
| Preventable hospital stays | 95 | 61 | 1.6 |
| Children in poverty | 30% | 9% | 3.5 |
| Access to healthy foods | 33% | 47% | 0.7 |

Are Rankings Helpful?

Background Methods Results Discussion & Conclusions

Background Methods Results Discussion & Conclusions

Geographic Distribution of Media (Broadcast & Print Media, 2 weeks after release)

Impact Analysis (March, 2010). *County Health Rankings* Community Impact Report

Background Methods Results Discussion & Conclusions

But Rankings Are Also Controversial

- Unintended negative reactions in least healthy counties
- Complacency in the healthiest counties
- Differences in ranks may not be statistically significant
- Ranks are only one factor to consider when setting priorities
- The “action” that is needed in an unhealthy county may be complex and expensive

Background Methods Results Discussion & Conclusions

Is “County” the Right Unit of Analysis?

- Problems
 - No county government structure in some states
 - Counties can vary greatly in area, population size and demographics
- Possible solutions
 - Drill down, e.g., cities, population subgroups
 - Roll up e.g., public health regions

Background Methods Results Discussion & Conclusions

Why Rank Within vs. Across States?

- Focus *within* states aligns more closely with how public health programs and policies are developed
- Ranking *within* states will allow state customization in future years
- Although state customization will not be consistent with national benchmarks
- Tells a different story ...

Background Methods Results Discussion & Conclusions

What Makes “News?”

Victor Cohn, News and Numbers

Background Methods Results Discussion & Conclusions

What Happens to Rankings Over Time?

- Should we keep the model stable or improve it as additional data become available?
 - If model stable and everyone improves, rankings stay the same
 - If model improved, rankings will change
- Ideally, if health improves everywhere, rankings would become random.

Background Methods Results Discussion & Conclusions

Our Conclusions

- The Rankings focus the discussion on the multiple determinants of the health of populations
- Hopefully they also draw in partners beyond governmental public health
- And ...
