In *Future of the Mind*, physicist Michio Kaku proposes:

“Consciousness is the process of creating a model of the world using multiple feedback loops in various parameters (e.g., in temperature, space, time, and in relation to others) in order to accomplish a goal (e.g., find mates, food, shelter).”

“Intelligence may be viewed as the complexity of our simulations of the future.”

“The key to games . . .

. . . is the ability to simulate the future.”

So Let’s Get Smarter!

Join Alex Jurkat, Dima Kassab and other INF faculty for INF Game Night

July 1, Wednesday
August 7, Friday

Room BA 349
6-9 pm

Bring friends, family, games & snacks
