International Student Health Center Requirements

4 Required Steps for All UAlbany International Students:

1. Submit Required Health Form
2. Submit MMR Information
3. Tuberculosis Screening
4. Acknowledge Meningitis Statement

Required Health Form

All students must submit a completed Required Health Form. This form and any supporting information should be received within two weeks of admission.

Mandatory Vaccination

Per Public Health Law 2165, all students taking 6 or more credits must submit a copy of their MMR immunizations (or copies of lab tests confirming immunity to Measles, Mumps and Rubella). Details on Immunization requirements can be found on the Health Center's website.

Tuberculosis Screening Process

All students who have spent over 4 weeks in any TB endemic country within the past 5 years must submit the results of TB blood test to the Health Center (QuantiFERON or T-Spot). TB blood test results must include the lab test report. The report must be in English and include two patient identifiers (preferably name and date of birth).

It is best if these tests can be done before you arrive in Albany. However if needed, they can be done when you arrive on campus. Details on TB requirements can be found on the Health Center's website.

Acknowledge Meningitis Statement

All students must comply with PHL-2167 which requires them to acknowledge receipt of information pertinent to Meningococcal meningitis and the Meningococcal vaccine. This can be easily accomplished by signing on to MyUAlbany.

More Information

Find more information about the University Health Center on their website: http://www.albany.edu/health_center/index.shtml

There is a special section for New Students that will provide you with great information.

Failure to submit a completed all four of these requirements will result in administrative holds being placed on a student's account, which may affect registration for classes.
