

## askIT : Mac OS X 10.0 wireless (WPA) setup - Detailed

This page last changed on Sep 04, 2008 by rw895919.

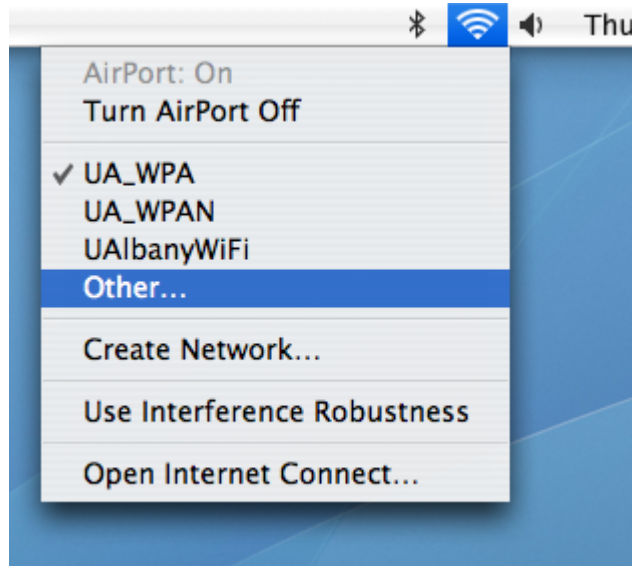

### Wireless 802.1x Authentication - Mac OS X 10.0

#### Accessing and Configuring 802.1x Authentication for Mac OS X 10.0

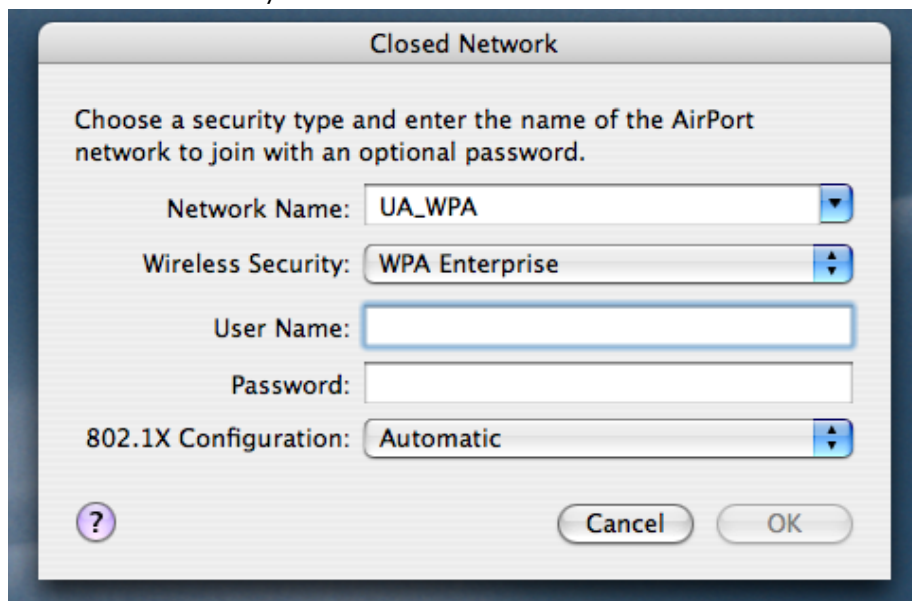

1. Click on the Airport symbol at the top of the screen. (If AirPort is off, select Turn AirPort On and then click the AirPort icon again.)

2. From the drop-down menu, click on **Join Other Network..**

3. In the dialog box that appears enter UA\_WPA (case sensitive) as the Network Name and select WPA Enterprise as the Wireless Security.

4. Enter in your NetID and UNIX password for User Name and Password, Click OK
5. You will be prompted to Verify Certificate. Select **Continue** to connect to the network. The network is now available. Please note that it may take several seconds for your credentials to be authenticated - Internet access is not granted until the authentication is complete.
