Role of Scientist Mentors

Mentors are the guiding force behind the success of students presenting their work at JSHS. Through the Science Research in the High School program, students work closely with a mentor who assists them with their scientific research. The mentor -- from the sciences, academia or the business world -- provides the impetus and guidance a student needs to bring his/her research topic through the stages of experimentation and analysis to the conclusions and, indeed, revelations, that are unveiled at the JSHS. Mentors are encouraged to attend the JSHS.
