Strategic Trade Control Legislation Development & Licensing Assistance - Iraq

First, CPR associates will conduct a thorough review of Iraq’s existing legal authorities to determine all existing legal-regulatory gaps. Prior to the first consultation, the CPR Team will review Iraqi legal instruments, such as the Nonproliferation Act 2012, the Instructions of Implementation [of] Nonproliferation Treaties and Conventions 2009, Law No. 99/1980 on Preventing Harmful Radiation, and the Law on Weapons (as amended), and identify specific areas where these legal authorities can be amended or augmented, at the executive level, in order to enable more effective and comprehensive regulation of trade in dual-use and munitions-related goods and technologies in Iraq.

The Project Team will conduct three face to face consultations with five (5) GOI officials in Amman, Jordan.

The Project Team will formulate a plan to facilitate regular contact with the GOI officials throughout the period of performance. CPR associates will contact GOI officials periodically, in accordance with GOR and Post protocols, to check in and oversee the status of their efforts.
