Note: These data are from a survey of local government officials conducted by The Waters Consulting Group, Inc. for the International City/County Management Association beginning in July 2005. Of the 8,676 cities surveyed, 2,234 returned the questionnaires for a response rate of 26%. The mean salary level is calculated by dividing the total number of salaries into the total amount paid in salaries. The median salary level is the salary that marks the point below which and above which 50% of all salaries fall. When there is an even number of observations, the mean of the two middle observations is reported. Classifications having less than three cities reporting are excluded by the Source because meaningful statistics cannot be computed. Therefore, the number reporting in subcategories does not always add to the total reporting. The term "cities" refers to cities, villages, towns, townships, and boroughs. For definitions of terms, a list of States in regions, and detail of survey response rates, see [Appendix 2](#).
