Note: See Note, table 3.125.2005. These data are estimates based on characteristics of known offenders from the Federal Bureau of Investigation's Supplementary Homicide Reports and an imputation procedure for cases where information on the offender was unknown because no suspects were identified (unsolved cases). The imputation procedure used to adjust for unsolved homicides is based on characteristics of the victim, circumstances of the incident, and year the incident occurred. Some data have been revised by the Source and may differ from previous editions of SOURCEBOOK.
