

*Third Thursday
Breakfast Broadcast*

Thursday, July 16, 2009, 9:00 - 10:00 am ET

Men's Health

Joe Zoske, MS, MSW, LMSW

Siena College

House of Social Work

Males of all ages experience disproportionately higher rates for injury and premature death. Further, they lead more risky lifestyles and generally avoid preventive care. This presents a public health dilemma that affects not only males but also their families, workplaces, and communities. A combination of health psychology, gender studies, and health promotion models provides a critical analysis of these factors. They also offer a means to create more male-affirming and effective health care and to lessen gender health disparities.
