

Thursday - February 21, 2008, 9:00 - 10:00 am ET

Diabetes: What's depression got to do with it?

Michelle Owens, PhD

Behavioral Scientist

Centers for Disease Control & Prevention

Division of Diabetes

Depression is two times more common in people who have diabetes than in people who do not have the disease. Recent studies have shown a significant correlation between the symptoms of depression and the number and severity of diabetes complications. In addition, total health care expenditures for people with diabetes and depression are 4.5 times higher than for those without depression. This broadcast will provide important information for health professionals about the link between diabetes and depression.

Registration

To register for the FREE satellite downlink or live webcast, log on to:

www.t2b2.org
