Instructions for Short Paper

Find a news article, published since January 1, 2016, that you can model using the economic models we have studied in class to date.

Cut out or print the news article and include it with your paper.

Write a paper (double-spaced, single-sided, one-inch margins all around – two pages if undergraduate, three-five pages if graduate) changing the language of the journalist to the more specific language of economic models. Explain exactly what the journalist is saying in terms of economic models, and determine whether the journalist’s conclusions are consistent with what the economic models imply. Include fully labeled graphs wherever possible. The graphs should be included in a separate appendix (in addition to the required number of typed pages of text), but be sure to refer to the graphs and describe what they show in the text of your paper. I will not pay attention to graphs that are not described in the main body of your paper. The appendix with the graphs should contain no text.

The grade for the paper will be determined by:

1. Does your choice of article permit analysis with models we have studied to date?
2. Is the article rich enough to allow you to demonstrate your knowledge of economics, or is the article very simple with only a single (or a few) idea(s)?
3. Do the economic models you use to describe the journalist’s ideas correctly illustrate the verbal arguments by the journalist?
4. Does your paper show understanding of the economic models you use?
5. Is your paper well-written? Does it have an introduction with a thesis statement, a body supporting the thesis statement, and a conclusion?

Papers are due at the beginning of class (before I begin the lecture) on their due date. Papers turned in between the beginning of the class in which they are due and the beginning of the next class will be penalized one letter grade. Papers turned in two classes late, will be penalized two letter grades, and the pattern continues.
