In accordance with practice guidelines, the comprehensive autism evaluation will occur over several sessions and include the following components:

- A detailed psychosocial/developmental history and review of records
- Formal evaluation of intellectual, adaptive, and behavioral functioning using standardized measures, including the Autism Diagnostic Observation Schedule (ADOS)
- Direct observation of social interaction, communication, and behavior
- Consideration of possible diagnoses and appropriate referrals
- In-person feedback session and comprehensive written report, including recommendations for intervention planning in home, school, and/or community

Diagnostic and psychosocial assessment services for individuals ages 18 months to 21 years conducted by clinical psychologists with autism expertise
