Research Interests

Databases and distributed systems, real-time data stream processing, fault tolerance, load management, Internet-scale data management, and ubiquitous computing.

In today's world of ubiquitous computing, a large number of interconnected computing and sensing devices are available. The goal of my research is to build highly usable information systems that can help individuals and organizations make smart decisions at the right moments. Crucial challenges in this research include quickly collecting, processing, and delivering relevant information in a scalable, resource-efficient, and fault-tolerant manner. My recent work centered on fast and reliable processing of real-time data streams despite slow or failed servers and networks. In addition to several general recovery techniques, I developed customized solutions for two popular types of computing environments. For commodity server clusters, I designed and implemented a fast recovery technique in which processing modules on each server are backed up on different servers and thus can be recovered in parallel. For the Internet, I developed an approach where multiple processing replicas send outputs to downstream replicas, allowing each replica to use whichever data arrives first. I have published more than 20 research articles on the aforementioned subject and others, including load balancing, data dissemination, and concurrency control. My ongoing research focuses on understanding the nature of failures in various contexts (e.g., data centers, the Internet, sensor networks) and developing appropriate solutions for such failures. I also intend to develop information systems that can integrate diverse live and stored online data, including Web feeds, audio/video streams, sensor signals, images, and text.

Biographical Sketch

Jeong-Hyon Hwang completed his Ph.D. in Computer Science at Brown University in 2008 and received M.S. and B.S. degrees in Computer Science from Brown University in 2003 and Korea University in 1998, respectively. His research on fast, fault-tolerant, resource-efficient, and scalable processing of real-time data streams has been conducted in collaboration with researchers at MIT, Brandeis University, Brown University, and IBM Research. He has co-authored more than 20 research articles, filed a US patent application, translated two books on algorithms and computer programming into Korean, and served as a program committee member or a reviewer for several prestigious conferences on computer systems. Jeong-Hyon is a recipient of the 2005 SIGMOD best demonstration award. He received a national scholarship and a software development award, both from the Ministry of Information and Communication of Korea. Jeong-Hyon also has industrial experience as a software development team manager and a software engineer.

Siwei Lyu

Assistant Professor
Computer Science Department
College of Computing and Information

lsw@cs.albany.edu
www.cs.albany.edu/~lsw
(518) 123-4567
Library-96J

Research Interests

Statistical modeling of images, digital image forensics, computer vision, image processing, machine learning and pattern recognition.

My main research interest is in modeling the statistics of photographic images. Within this area, my research work spans multiple levels of focus, from a MRF-based joint probabilistic model of photographic image wavelet coefficients, to a non-linear image representation with perceptual relevance, to a concise image feature characterizing photographic images in the wavelet domain, all of which aim to construct effective statistical description of photographic images with feasible computation load. I applied these techniques to solve problems in image processing, analysis and forensics.

Biographical Sketch

Dr. Siwei Lyu received his B.S. degree in Information Science in 1997 and his MS degree in Computer Science in 2000, both from Peking University, China, and his Ph.D. degree in Computer Science from Dartmouth College, in 2005. From 1998 to 2000, he worked part-time at the Founder Research and Development Center, Beijing, China, where he developed a script language for an interactive multi-media authoring system. From 2000 to 2001, he worked at Microsoft Research Asia (then Microsoft Research China) as an assistant researcher, where he worked on techniques to render and recognize digital inks, for which he holds two patents. From 2005 to 2008, he was a post-doctoral research associate at New York University. He is currently an assistant professor at Computer Science Department at the University at Albany, SUNY. His research interests are in machine learning applied to image modeling, computer vision, computational neural science, digital image forensics and bioinformatics.

Donghee Sinn

Assistant Professor
Information Studies Department
College of Computing and Information

DSinn@uamail.albany.edu
www.albany.edu/~ds179479
(518) 442-5117
Draper 102

Research Interests

Archives, archival research and public memory, archival use/user studies, personal archiving in the web environment, archiving web contents, public memory, and Asian cultures and heritages.

One of my major interest centers on the use of archival holdings and the actual influence of archival materials in the entity of knowledge in a certain area. It is crucial for archives to understand how users discover and actually utilize archival holdings and how much credibility they grant to them for their research. To date there have not been many archival user studies investigated from actual publications of archival researchers.

My research interests also include the general public's personal archiving in the web environment. Individuals' personal records will be future historical resources that document the era in which they lived. These days, people create their letters and diaries in electronic formats and many preserve them in web domains. Individuals' personal web contents have not yet been regarded as historic resources or archival materials to the same degree as traditional personal records. In a similar context, web communities or institutions which do not exist in a physical form might also encounter the same situation in archiving their history. Whenever there is a need to preserve documents in any format, information professionals should play a definitive role to provide guidance and consultation in archiving activities.

Another area of research interest is archival research in relation with public memory, especially for various cultures and historical events. The American society is composed of diverse ethnic groups and cultural heritages, giving the country a unique character and thereby creating a dynamic driving force in society. However, little has been explored about the relationship between public memory and archival collections in the history of various cultural heritages.

Biographical Sketch

Donghee Sinn is an Assistant Professor of the Department of Information Studies. She specializes in Archives and Records Management, and her research interests focus particularly on the archival research in relation with public memory, archival use/user studies, and personal archiving in the web environment. She has a B.A. and a Master's in Library and Information Science from Chung-Ang University in Seoul, Korea with a focus on history of books and Korean bibliography, and a Ph.D. in Library and Information Science from the University of Pittsburgh, specializing in Archives and Records Management. Previously, Donghee worked at the National Archives in Korea in acquisition and appraisal, taught at a college in Korean bibliography, and worked as a reference librarian in Korea. While working for a Ph.D. in the States, she worked in the East Asian Library for the Korean Collection at the University of Pittsburgh. Since then she has been participating and serving on the Library Technology Committee and the Membership Committee of the Council of East Asian Libraries, which is a sub group of the Asian Studies Association. She also worked as a webmaster for one of the institutes at the University of Pittsburgh. Her dissertation study was recognized and prizes were awarded from the ALA (American Library Association) and her own school. She is very interested in building bridges among several disciplines including archival studies, archiving in the web environment, and the East Asian culture and heritages.

College of Computing and Information
Research Proposal Development Award

Revised 8/28/08

The Dean will fund up to two research proposal development initiatives in Spring '09 through one-course "buyouts."

How to Apply:

Attend the October "Food for Thought" to exchange preliminary research ideas.

Submit a one-page description of your research initiative by December 1 to Brian Gabriel.

- Provide the title and a description of the research project for which you and your colleagues will develop a grant proposal.
- Name two or more faculty members who will collaborate in conducting the research, at least one of whom must be a member of the CCI faculty, and indicate whose time will be "bought out" to work on developing the grant proposal.
- Name at least one funding program to which you will submit your research grant application. A copy of the funding program announcement or information about the funding agency should be appended.

Preference will be given to research projects that:

- Involve CCI faculty members from more than one department.
- Fit within one of CCI's research themes:
Information, Government, & a Democratic Society or *Computing and Cognition*.
- Match the interests of specific funding programs.

**College of Computing and Information
Diversity Committee**

Revised 8/29/08

Establishing a Diversity Committee will formalize and recognize the involvement of faculty and students in our efforts to increase the participation of underrepresented populations in IT.

Following is a proposed charge to the CCI Diversity Committee, pending adoption by the faculty.

- To identify the changes required to increase and sustain diversity in both the undergraduate and graduate programs, and engage the faculty in making those changes.
- To gather supporting data as required.
- To select, adapt, and amplify recommendations from the forthcoming NCWIT Extension Service report (January 2009) and work with the faculty to define an integrated action plan to which the faculty is internally committed.
- To coordinate efforts to implement those actions.
- To document and report the changes and their effects.
 - o For undergraduate students, success will be measured by achievement of an acceptable percentage (to be defined) of students from underrepresented populations in the target majors, and related rates of graduation and entry into graduate programs.
 - o For graduate students, success will be measured by acceptable percentages (to be defined) of applications, percentage reaching critical milestones, including passing qualifying exams, successfully defending proposals and dissertations, and obtaining quality professional positions.
 - o For both the undergraduate and graduate programs, the academic quality of underrepresented populations in target majors is to remain the same or improve.
