

High School Math Problems  
2017  
Week 14  
Problem

If  $x, y \in \mathbb{R}$ , what is the minimum value of

$$B(x, y) = x^2 + 2xy + 2y^2 + 4y + 2x - 2017$$

and for what values of  $x$  and  $y$  is it achieved?
