

Modalities:

100% In-Person:

All contact hours will be conducted in-person.

Mixed In-Person:

The university has established learning options that allow flexibility for in-person classes.

- **Alternating Attendance**
 - Students in the class are divided into two or more groups. Each group of students meets with the instructor in-person in the classroom on an alternating schedule. Remaining contact hours will be completed through interactive and/or applied learning activities.
- **Alternating Lab Sessions**
 - Lab sections are divided into two or more groups of students. The groups participate in-person in the lab on an alternating schedule. On days when a student is not physically in the lab they will participate in interactive and/or applied learning activities.
- **Synchronous Simulcast**
 - This in-person class could have one or more remote students. Some students meet with the instructor in the classroom at every class meeting, other students in the class will interact with the instructor and their peers through Zoom in a synchronous manner.
 - Students will select if they are attending in-person or online at the point of registration.
 - Students who select online, will not be able to attend in-person.

Blended/Hybrid:

Blended/Hybrid classes have a reduced classroom meeting pattern. These classes meet in-person less frequently and online course activity replaces a portion of in-person meetings using Blackboard or Zoom.

- All Blended/Hybrid classes have one of the following attributes describing the faculty and student interactions for the online portion of the class:
 - Synchronous - Class interaction with the instructor and peers occurs through Blackboard or Zoom during the scheduled class meeting times.
 - Asynchronous - Class interaction with the instructor and peers occurs through Blackboard or Zoom without real-time interaction.
 - Mixed Synchronous/Asynchronous - Class interaction with the instructor and peers occurs through Blackboard with some scheduled synchronous sessions via Zoom.
- The in-person portion of a Blended/Hybrid class can be Synchronous Simulcast.

Fully Online (100%):

100% online, classes meet fully online and are not assigned to a physical classroom location.

- All online classes have one of the following attributes describing faculty and student interactions:
 - Synchronous - Class interaction with the instructor and peers occurs through Blackboard or Zoom during the scheduled class meeting times.

- Asynchronous - Class interaction with the instructor and peers occurs through Blackboard or Zoom without real-time interaction.
- Mixed Synchronous/Asynchronous - Class interaction with the instructor and peers occurs through Blackboard with some scheduled synchronous sessions via Zoom.

Note: Synchronous teaching and learning happen at the same time (e.g., students meet with the instructor in-person or online at specified times). Asynchronous teaching and learning do not happen in the same place or at the same time. Mixed Asynchronous/Synchronous teaching and learning happen as a mix of asynchronous/synchronous.
