Note: These data are from the School Crime Supplement (SCS) to the National Crime Victimization Survey (NCVS). The NCVS is a continuous survey of a representative sample of households in the United States conducted for the U.S. Department of Justice, Bureau of Justice Statistics by the U.S. Census Bureau. The SCS is an additional questionnaire fielded with the 1995, 1999, 2001, 2003, 2005, and 2007 NCVS and was administered to a nationally representative sample of students 12 to 18 years of age. Eligible respondents were asked the supplemental SCS questions only after completing the NCVS interview. Persons eligible for the SCS were those NCVS respondents who were enrolled in grades 6 through 12 at a school leading to a high school diploma and had attended school at any time during the 6 months preceding the interview. For the 2007 SCS, eligibility extended to those who had attended school any time during the school year. A total of 9,728 students participated in the 1995 SCS, 8,398 in the 1999 SCS, 8,374 in the 2001 SCS, 7,152 in the 2003 SCS, 6,297 in the 2005 SCS, and 5,600 in the 2007 SCS.

In the 1995, 1999, 2001, 2003, 2005, and 2007 SCS, the household completion rates were 95%, 94%, 93%, 92%, 91%, and 90%, respectively; and the student completion rates were 78%, 78%, 77%, 70%, 62%, and 58%, respectively. Thus, the overall unweighted SCS response rate (calculated by multiplying the household completion rate by the student completion rate) was 74% in 1995, 73% in 1999, 72% in 2001, 64% in 2003, 56% in 2005, and 53% in 2007. Response rates for most survey items were high, typically over 95% of all eligible respondents. However, users should note that due to the low overall response rate for 2005 the data did not meet statistical standards of precision set by the Source and should be interpreted with caution. Also, due to the low overall response rate for 2007 the Source conducted nonresponse bias analysis and evidence of some bias was found in the race/ethnicity variable. However, further analysis suggested that this bias had little impact on the overall estimates.

Beginning with the 2001 data, two changes were made to the SCS. First, in 1995 and 1999, "at school" was defined as in the school building, on the school grounds, or on a school bus. Beginning in 2001, "at school" was defined as in the school building, on school property, on a school bus, or going to and from school. The 1995 and 1999 estimates for "fear of attack at school" have been recalculated by the Source to combine fear of attack at school and fear of attack going to and from school and are now consistent with the 2001 estimates. Second, in 1995 and 1999, students were asked if they avoided places or were fearful because they thought someone would "attack or harm" them. Beginning in 2001, the language was changed to "attack or threaten to attack" them.

Some data have been revised by the Source and may differ from previous editions of SOURCEBOOK.

^aIncludes students who reported that they sometimes or most of the time feared being victimized in this way.

^bIncludes the entrance into the school, any hallways or stairs in the school, parts of the school cafeteria, any school restrooms, and other places inside the school building.

^cThe Source recommends that users interpret this figure with caution.

^dFigure suppressed because reporting standards set by the Source were not met.
