School of Public Health  
University at Albany

Graduate Program of Study

January 2015

## Department of Biomedical Sciences Directory

### Department Chair

Nicholas Mantis, PhD  
David Axelrod Institute, Room 4100  
120 New Scotland Avenue  
Albany, NY 12208  
[nmantis@albany.edu](mailto:nmantis@albany.edu)

### Associate Chair

Janice Pata, PhD  
Center for Medical Science, Room 2007  
150 New Scotland Avenue  
Albany, NY 12208  
518-402-2595  
[janice.pata@health.ny.gov](mailto:janice.pata@health.ny.gov)

### Graduate Program Administrator

Anthony Torres  
Center for Medical Science, Room 5200  
150 New Scotland Avenue  
Albany, NY 12208  
518-402-2510  
[atorres@albany.edu](mailto:atorres@albany.edu)

## Track Coordinators

### Immunology and Infectious Diseases Track

William Lee, PhD  
David Axelrod Institute, Room 5080  
120 New Scotland Avenue  
Albany, NY 12208  
518-473-3543  
[william.lee@health.ny.gov](mailto:william.lee@health.ny.gov)

Kathleen McDonough, PhD  
David Axelrod Institute, Room 4112  
120 New Scotland Avenue  
Albany, NY 12208  
518-486-4253  
[kathleen.mcdonough@health.ny.gov](mailto:kathleen.mcdonough@health.ny.gov)

### Molecular Genetics Track

Douglas Conklin, PhD  
Cancer Research Center, Room 204  
East Campus, One Discovery Drive  
Rensselaer, NY 12144  
518-591-7154  
[dconklin@albany.edu](mailto:dconklin@albany.edu)

### Neuroscience Track

Valerie Bolivar, PhD  
Center for Medical Science, Room 5342  
150 New Scotland Avenue  
Albany, NY 12208  
518-473-2207  
[valerie.bolivar@health.ny.gov](mailto:valerie.bolivar@health.ny.gov)

### Structural and Cell Biology Track

Joachim Jaeger, PhD  
Center for Medical Science, Room 2008  
150 New Scotland Avenue  
Albany, NY 12208  
518-408-2225  
[joachim.jaeger@health.ny.gov](mailto:joachim.jaeger@health.ny.gov)

## **Training Program Directors**

## **DEPARTMENT OF BIOMEDICAL SCIENCES**

School of Public Health, University at Albany

The Department of Biomedical Sciences comprises the following tracks and training programs:

- Immunology and Infectious Diseases (IID)
- Molecular Genetics (MG)
- Neuroscience (NEU)
- Structural and Cell Biology (SCB)
- Biodefense and Emerging Infectious Disease Training Program (BDEID)

Applicants to either the MS or PhD program are expected to hold a baccalaureate with a combined total of at least 42 credits in biology, chemistry, mathematics, or physics. Typical applicants have an undergraduate degree in either the biological, chemical, or physical sciences, or they have a demonstrated proficiency in these areas as well as mathematics from a recognized college or university. Applicants are required to submit official scores of the Graduate Record Examination aptitude test; the advanced test in biology, chemistry, or physics is recommended. A minimum score of 600 on the paper based TOEFL (250 on the computerized test; 100 on the internet based test) is required for international students.

The graduate program in Biomedical Sciences (BMS) is individualized. Courses are selected with the assistance of faculty advisors, in accordance with the requirements of the tracks and taking into account the background and interests of the individual student. Students may be admitted for study toward either the PhD or MS degree.

During the first two years all students Take BMS 500 Molecular Cell Biology; BMS 502 Macromolecular Structure and Function; BMS 590 Laboratory Rotations in Biomedical Science; BMS 665 Current Literature; BMS 601 Introduction to Biomedical Sciences; and BMS 670 Responsible Conduct of Scientific Research. Elective course are available in areas such as molecular biology, genetics, immunology, infectious disease, structural biology, and neuroscience.

The laboratory rotations course (BMS 590) is taken in the first semester by all students, regardless of their previous laboratory experience. The aims of the laboratory rotations are: (1) to allow the student to interact with faculty from varied disciplines, (2) to introduce the student to laboratory techniques and principles, and (3) to aid the student in selecting a mentor for their graduate research. All students complete a minimum of two rotations under two different mentors.

BMS 601 is a multi-disciplinary introduction to fundamental principles of the biomedical sciences focusing on the molecular basis of human disease. The course integrates basic sciences and genomic-scale technology with human health, environmental induced disease and public health. Students will also gain an understanding of how bench science

leads to improvements in public health and become familiar with grant writing and scientific paper presentation and review.

BMS 670 is aimed at promoting a better recognition of the values underlying the ethical performance of science. Case studies on topics such as data management; authorship; peer review; conflict of interest; use of animals in research; human subjects in research; and policies on misconduct will be discussed.

In addition to formal course work, emphasis is placed on informal instruction and interaction between students and faculty in the laboratory, and active participation in Departmental seminars and journal clubs. Students in both the MS and PhD programs will typically select a mentor and a track by the end of the first semester. PhD students are expected to be admitted to candidacy for the doctoral degree by the end of the second year.

Students in the Department of Biomedical Sciences can choose their course of study from the following areas of research:

### **Immunology and Infectious Diseases**

The study of the basic biology and pathogenesis of viruses, bacteria, fungi, and protozoan pathogens, their interaction with host cells at the cellular and molecular level, and the response of the immune system to these microbes. Scientists in this track utilize structural biology, biochemistry, molecular biology, cell biology, arthropod biology, ecology, evolution, and genetics to investigate the problems of infectious diseases and immune-related pathologies.

### **Molecular Genetics**

The study of the structure and function of genes and genomes at a molecular level. Faculty in the Molecular Genetics Track focus on the genetics of humans, model organisms from *E. coli* to mice, and viral and bacterial pathogens. Faculty research encompasses genomics, population genetics, quantitative genetics, cancer genetics, developmental genetics, gene expression, gene regulation and genome biology and evolution.

### **Neuroscience**

The study of basic biological principles underlying nervous system functions and their application to disease. Neuroscience faculty members study problems ranging from understanding the molecular basis of neurodegenerative and neuropsychiatric disease to developing effective therapies, including workable computer-brain interfaces. Subspecialization may be pursued in neurogenetics, neurophysiology, neuroimmunology, neuroanatomy, and neurotoxicology. Scientists in this track collaborate extensively with those in other BMS tracks, as well as with researchers and physicians in area hospitals.

## **Structural and Cell Biology**

The study of the macromolecular structures and molecular machines, using advanced 3D light and electron microscopy, X-ray crystallography, NMR spectroscopy, molecular modeling and virtual screening. The emphasis is on understanding cellular function, the assembly of integrated molecular machines, and structural or molecular aspects of human disease. Topics include replication, transcription and translation; molecular recognition and complex formation; cell division; and how defects in the cellular machinery can lead to cancer and other important diseases. Questions addressed include: how are molecular machines assembled, how do they function (or malfunction), and how are they regulated?

## **Biodefense and Emerging Infectious Disease Training Program**

The BDEID training program bridges basic biomedical research and public health with emphasis on the fundamentals of infectious disease and immunology. Practical training is offered in epidemiology, emerging infections, and biodefense science in biocontainment laboratories. Program faculty focus on the areas of pathogen biology and determinants of pathogenesis; animal models of infection and immunity; host response and immunity, epidemiology; natural history and ecology of select agents and diseases; novel therapeutic targets; and development of diagnostic methodologies. Trainees will be broadly trained to address the challenges associated with understanding the causes of infectious disease.

\*\*\*

The course of study of each student is planned with a faculty advisor who takes into account the student's previous preparation; area of specialization, and professional objectives. Students should refer to the Program of Study worksheets included in this booklet to identify the curriculum appropriate to their area of concentration.

The following courses may be taken by any student, in consultation with the academic mentor.

BMS 506 Introduction to Immunology	2cr
BMS 514 Cellular and Molecular Immunology	3cr
BMS 552 Medical Entomology	3cr
BMS 553 Virology	4cr
BMS 555 Biodefense Sciences	1cr
BMS 556 Biodefense Laboratory	1cr
BMS 557 Emerging Infectious Diseases	1cr
BMS 604 Cellular and Molecular Neuroscience	3cr
BMS 606 Biology of Model Organisms	3cr
BMS 610 Microbial Pathogenesis	3cr

BMS 612 Neuroanatomy and Nervous System Disorders	3cr
BMS 622 Cancer Biology	3cr
BMS 632 Molecular and Cellular Biology of Prokaryotes	3cr
BMS 635 Introduction to Structural Molecular Biology	3cr
BMS 652 Neuroimmunology Colloquium	2cr
BMS 655 NanoBioTechnology	3cr
BMS 660 Readings in Molecular Endocrinology	3cr
BMS 622 Student Seminars in Biomedical Sciences	2cr
BMS 663 Mammalian Molecular Genetics	3cr
BMS 666 Contemporary Topics in Immunology	0-1cr
BMS 894 Directed Readings in Biomedical Sciences	1-6cr
EPI 551 Basic Principles of Statistical Inference	3cr
BMS 692 Advanced Topics in BMS	1cr

Students are required to complete the research progress report at the conclusion of each semester. This gives the student and the mentor an opportunity to assess the students research progress and develop plans for continued success.

<http://www.albany.edu/sph/bmsdepartmentforms.php>

Students may take classes offered in other departments at the University at Albany. Students also have the option of cross registering for graduate level courses at Albany Medical College, Rensselaer Polytechnic Institute and other local colleges. For information on the cross registration process, visit

<http://www.albany.edu/registrar/cross-registration.php>

## **ACADEMIC STANDARDS**

All students are expected to remain in good academic standing during the course of their study, i.e. maintain at least a B average and obtain a grade of satisfactory (S) in all credit requirements applicable to the graduate degree.

A student whose record falls below these standards will, at the discretion of the Department, either be placed on probation or dismissed. Students on probation are conditionally allowed to continue in the department program for a limited time period in order to achieve good academic standing and are expected to obtain at least a B or S grade in all of their courses. A student whose record falls below acceptable standards or whose performance otherwise indicates a lack of ability or effort needed to succeed in the graduate program may at any time be denied permission for further study.

Note the following University policy:

“The candidacy of graduate students who receive a grade of *U* in a required seminar or research course, in a practicum, student teaching course, internship, field course or similar application course, on a thesis, or in a dissertation course, is terminated unless an exception is recommended for compelling reasons by their department or school, and they may not register for further study unless they are later reinstated. Under certain conditions, and with the recommendations of the student's major department, such a student may apply to the Dean of Graduate Studies for reinstatement, but ordinarily at least one session must intervene before a reinstatement.”

See the Academic Standards section of the Graduate Bulletin for additional information.  
[http://www.albany.edu/graduatebulletin/admission\\_graduate\\_requirements.htm](http://www.albany.edu/graduatebulletin/admission_graduate_requirements.htm)

## **PROBATION**

Students on probation are conditionally allowed to continue in the program for a limited period of time in order to correct a deficiency in their record (e.g. grade problem, failure to complete qualifying exams or admission to candidacy requirements in a timely manner, etc.). The probationary period usually lasts for at least one semester and, depending upon the student's progress, may be extended for up to one year. All deficiencies must be corrected before probation ends. A student on probation may have their University stipend and/or tuition scholarship withdrawn at any time.

## **ACADEMIC INTEGRITY**

Academic dishonesty (e.g. plagiarism, cheating on examinations, falsification of data, etc) is unacceptable and will not be tolerated. Any student who violates academic integrity standards will automatically be placed on disciplinary probation for at least one semester. For violations associated with a course, the student may be required to retake the course at his/her own expense. Depending on the severity of the violation, the

student's stipend and /or tuition may also be revoked, or the student dismissed from the program. A report describing the violation and recommended sanctions imposed will be placed in the student's file, and a copy of the form will be distributed to the student's mentor and thesis committee members, the Dean of the School of Public Health, and the Office of Graduate Studies.

University policy states the following:

“If a faculty member informs the student that he or she will receive a failing grade in the course or other academic exercise as a result of academic dishonesty, the student receiving such penalty will not be permitted to withdraw from the course unless the grievance process or Office of Conflict Resolution and Civic Responsibility rules in favor of the student. Students who feel they have been erroneously penalized for an academic integrity infraction or who think that a penalty is inappropriate may grieve these issues through procedures developed for each college, school, program, or department of the University. Copies of the procedures are maintained in the School and College Deans' Offices or on their respective websites. A copy of the disposition of any grievance arising in matters of academic dishonesty will be attached to the Violation of Academic Integrity Report filed in the Office of the Vice Provost for Undergraduate Education or the Dean of Graduate Studies.”

Detailed information on the University's definitions and policies on academic dishonesty can be found in *Community Rights and Responsibilities*, a University at Albany publication, found online at <http://www.albany.edu/judicial/conduct.shtml>.

### **CODE OF CONDUCT**

The Department of Biomedical Sciences expects that all students will understand and adhere to the University at Albany Code of Conduct as detailed in the *Community Rights and Responsibilities* handbook

([http://www.albany.edu/studentconduct/community\\_rights\\_and\\_responsibilities.php](http://www.albany.edu/studentconduct/community_rights_and_responsibilities.php)).

The *Community Rights and Responsibilities* handbook states the following:

“*Community Rights and Responsibilities* is the official code of conduct for students outlining the expectations to which all our students are held. The University has formulated this code of standards and expectations, consistent with its purpose as an educational institution. These regulations and the procedures for their enforcement apply to all student conduct and behavior. Students should become familiar with this document, as it is important to understand that the freedom that is afforded to you as a member of this community comes with an associated responsibility.”

([http://www.albany.edu/studentconduct/community\\_rights\\_and\\_responsibilities.php](http://www.albany.edu/studentconduct/community_rights_and_responsibilities.php)).

## **REASONABLE ACCOMODATIONS**

Reasonable accommodations will be provided for students with documented physical, sensory, systemic, cognitive, learning and psychiatric disabilities. If you believe you have a disability requiring accommodation in this class, please notify the Director of the Disability Resource Center (Campus Center 137, 442-5490) at the start of the semester. That office will provide course instructor(s) with verification of your disability, and will recommend appropriate accommodations. More information can be found at: <http://www.albany.edu/disability/index.shtml> .

## PROGRAM LEADING TO THE MASTER OF SCIENCE (MS) DEGREE

### Program of Study and Research (36 credits minimum)

The course of study for the MS degree should take 2 years to complete beyond the baccalaureate.

#### 1. Required Courses

- 1) BMS 500: Molecular Cell Biology (4 credits)
- 2) BMS 502: Macromolecular Structure and Function (4 credits)
- 3) BMS 590: Lab Rotations (3credit) \*
- 4) BMS 601: Introduction to Biomedical Sciences (3 credits)
- 5) BMS 665: Journal Club (participation begins in spring semester of the first year; must be taken every semester thereafter for 0 or 1 credit; can be taken for credit a maximum of 2 times)
- 6) BMS 670: Responsible Conduct of Scientific Research (1 credit)

*\* Each rotation will require a minimum of 10 hours per week in the laboratory. Satisfactory completion of a rotation will consist of a written report and evaluation of a lab notebook. All students are encouraged to have selected a research mentor by the beginning of the spring semester. If a student has not chosen a mentor by the beginning of the spring semester, a 3<sup>rd</sup> and 4<sup>th</sup> rotation may be completed.*

2. **Additional courses** as approved by advisor. Total course credits to equal 22 course credits minimum.

3. Master's **thesis research** (BMS 699: 14 credits minimum). Students are required to complete the Progress Report form for BMS research courses each semester.  
<http://www.albany.edu/sph/bmsdepartmentforms.php>

4. Satisfactory completion of a Master's **major field examination**. This oral exam will be administered by a three member thesis advisory and examination committee consisting of the student's mentor and two additional faculty members from the BMS Department. The subject matter of this exam will be in the area of the student's proposed research, based on a written proposal of the planned thesis research project. The proposal (maximum of 6 pages, single-spaced, excluding references) must include specific aims for the project, background and significance of the proposed research, and a brief description of the approach that will be used to achieve the specific aims of the project. Preliminary data are not required or expected. The proposal should be developed in close communication with the mentor. Attention should be paid to the feasibility of completing the proposed research within the timeframe of the Master's program. The outcome of the oral exam will be based on the student's understanding of the scientific basis for the proposed research. **The exam must be taken by September 30<sup>th</sup> in the second year of full-time study in the Master's program. The exam may be retaken once.**

5. Satisfactory completion of a **written thesis**. The thesis has no page limitation and must present specific aims, background and significance, experimental designs and methods section, results section, discussion, conclusion, and references. The thesis is reviewed by the Masters Thesis committee, who will determine if the student understands the work done, interprets the results objectively, and can communicate the science effectively.

6. Satisfactory **defense of thesis**. The candidate will present an open oral seminar based on thesis research and defend his/her work in a closed meeting of the thesis committee.

7. Candidates must maintain a minimum of a **B average**.

< *If a student gets a C+ or lower in a departmental required course, he/she must retake the course.*

## Program of Study – Masters Degree

<b>Department Requirements (16 minimum to 17 maximum credits)</b>	<b>Credits</b>	<b>Grade</b>	<b>Semester Offered / Semester Completed</b>
BMS 500: Molecular Cell Biology	4		Fall – Year 1
BMS 502: Macromolecular Structure & Function	4		Fall – Year 1
BMS 590: Laboratory Rotations	3		Fall – Year 1
BMS 601: Introduction to Biomedical Sciences	3		Spring – Year 2
BMS 665: Journal Club (0/1)	1-2		Start Spring Year 1
BMS 670: Responsible Conduct of Research	1		Fall/Spring
<b>Electives (5 - 6 credits)</b>			
Elective 1			
Elective 2			
Elective 3			
Transfer credits			
<b>Total course credits required = 22</b>			
BMS 699: MS Thesis Research Credits (14 total required)			
<b>Total degree credits = 36</b>			

Mentor Approval Form submitted: \_\_\_\_\_  
(date)

Thesis Committee formed: \_\_\_\_\_  
(date)

Major Field Exam: \_\_\_\_\_  
(date)

## PROGRAM LEADING TO THE DOCTOR OF PHILOSOPHY DEGREE (PhD)

The program of study and research toward the PhD degree requires at least three academic years of full-time study and research beyond the baccalaureate, and typically involves five years of full-time study.

### Course Requirements (60 credits minimum)

#### 1. Required courses

- 1) BMS 500: Molecular Biology (4 credits)
- 2) BMS 502: Macromolecular Structure and Function (4 credits)
- 3) BMS 590: Laboratory rotations (3 credits) \*
- 4) BMS 601 - Introduction to Biomedical Sciences (3 credits)
- 5) BMS 665 - Journal Club (participation begins in spring semester of first year; must be taken every semester thereafter for 0 or 1 credit; maximum of 4 credits total) \*\*
- 6) BMS 670 - Responsible Conduct of Scientific Research (1 credit)

*\* 2 rotations are required of doctoral students. Each rotation will require a minimum of 10 hours per week in the laboratory. Satisfactory completion of a rotation will consist of a written report and evaluation of a lab notebook. All students are encouraged to have selected a research mentor by the beginning of the spring semester. If a student has not chosen a mentor by the beginning of the spring semester, a 3<sup>rd</sup> and 4<sup>th</sup> rotation may be completed.*

*\*\* First year doctoral students will participate in BMS 665 QEI Journal Club during the spring semester and then in sections appropriate to their laboratory research in following semesters.*

2. **Additional courses** as approved by advisor or required by track. Total course credits to equal 30 credits.

3. **Dissertation Research** BMS898 and BMS899: 30 credits minimum combined. BMS 898 is taken by students not yet admitted into candidacy for the degree; BMS 899 is required of all students admitted into candidacy for the degree. Students are required to complete the Progress Report form for BMS research courses each semester.  
<http://www.albany.edu/sph/bmsdepartmentforms.php>

4. **Admission to Candidacy:** Students must be admitted to candidacy by the end of their third year of study. A student is admitted to candidacy for the degree of Doctor of Philosophy upon meeting the following standards:

1. A minimum of a B average \*
2. Satisfactory record in course and seminar study requirements, 30 credits
3. Satisfactory completion of the research tool requirement

4. Satisfactory completion of both parts of the Qualifying Exam
5. Completion of University residence requirement, minimum of 7 credits per semester for 2 semesters.

*\* If a student gets a C+ or lower in a departmental required course, he/she must retake the course.*

### **TUITION POLICY**

Doctoral students are eligible to receive tuition scholarships for a period of four years. Students must be admitted into candidacy by the end of their third year of study. Contingent upon available funding, tuition scholarships may be provided at the rate of one (1) credit per semester to students beyond their fourth year of study.

### **RESEARCH TOOL REQUIREMENT**

The student must demonstrate proficiency in an approved research tool. This can be accomplished by demonstrating a reading knowledge of one appropriate foreign language or competency in computer science, statistical analysis, or biometrics. Alternatives may include appropriate courses which will not be used toward degree credit.

Students must submit a written request to the Department as to their choice to satisfy the research tool requirement. This request must be submitted to and approved by the Graduate Academic Committee **BEFORE** the start of the proposed tool.

Examples of Research Tools may include:

Formal approved courses (a minimum of a B grade) selected from the list below:

EPI 551 Basic Principles of Statistical Inference

MAT 565 Applied Statistics

CSI 580 Computer Science in Scientific Disciplines

CSI 503 Algorithms and Data Structures

*(Additional courses may be approved upon review by the GAC)*

- Computer knowledge - satisfied by writing a functional program on an appropriate problem)
- Technique Workshops (ie Light Microscopy; Crystallography) - satisfied through completion of project
- Foreign Language - written translation of a scientific paper

*Course credits used to fulfill the Research Tool Requirement cannot count towards the 30-credit course requirement.*

## **PhD QUALIFYING EXAM: PARTS I AND II**

**Part I: The Comprehensive Exam.** This is an oral exam taken at the end of May in the first year of study. It is intended to test the candidate's breadth of knowledge in the Biomedical Sciences, to determine whether the student can apply that knowledge to experimental hypotheses, and to test his/her ability to critique a scientific paper. The candidate will choose one of four papers selected by the examining committee. The papers will be representative of the four general track areas and will draw upon material covered in the first year courses. Students will be presented with the papers two weeks prior to the exam and will notify the QE1 committee of their choice of paper one week before the exam. In preparing for this exam, students are not permitted to consult with anyone, but may make full use of the library and all electronic resources. The student will be expected to present a 45-50 minute research grade seminar using the scientific paper of choice. The QE1 committee will then test the student's understanding on all aspects of biology relating to the paper. This may include any background necessary for a truly in-depth understanding of the paper. The oral exam is expected to take 60-90 minutes.

The QE1 committee will consist of four standing members representing each track. In addition, a fifth ad hoc member will attend the exam. The ad hoc member will be selected by the committee and will be an additional representative whose expertise covers the area of the selected paper. This fifth person may vary for each student.

The QE1 committee will provide their recommendation (Pass/Conditional Pass/Fail) to the Graduate Academic Committee after all students have completed the exam. If appropriate, the QE1 committee will recommend a Retake of the exam, and will provide conditions that must be satisfied to pass the exam.

The GAC will review each candidate's overall progress through the first year in the context of the QE1 result. The results of the recommendation of the GAC will be communicated to the student in an individual meeting with the GAC chair and the QE1 committee chair. Passing the QE1 is necessary but not sufficient for continuation in the PhD program. Students who fail QE1, but have passed each of their first year courses to the satisfaction of the GAC, may be allowed to retake the exam before the start of the second year. A second failure in the QE1 would result in dismissal from the PhD program. Students who fail the QE1 and do not make satisfactory progress in their course work will be dismissed from the PhD program.

Students on academic probation are not permitted to take QE1. Exceptions to this policy will be reviewed on an individual basis by the Graduate Academic Committee. Students seeking an exception must submit a written request to the GAC. Letters of evaluation from all rotation mentors must accompany the petition to the GAC.

*MS students will be allowed to take QE1 upon permission of the Graduate Academic Committee. Passing QE1 would be necessary but not sufficient for acceptance into the PhD program, which decision would be made by the Admissions Committee.*

## Part II: Defense of Proposal

**By the end of the third semester, the PhD Dissertation Committee must be formed.**

The Dissertation Committee is chaired (in the usual case) by the research mentor (a non-voting member) and composed of at least four other members, three from the BMS Department and one member whose primary academic appointment is outside the BMS Department, and who may be from another institution. In the case where the mentor is ineligible to chair the PhD Dissertation Committee, the committee may designate another member as chair, who then serves as a voting member. The composition of the PhD Dissertation Committee will be reviewed by the Graduate Academic Committee for final approval.

Within one year of successfully completing Part I of the qualifying exam, the student should complete Part II, a defense of proposal. This exam will test the student's depth of knowledge in his/her chosen area of specialization as well as the student's ability to write and defend a research proposal. This examination is to be on a topic intended to serve as the basis for the student's PhD dissertation research.

The student will write the proposal in the format of a mini-grant application, equivalent to a NRSA fellowship.\* The written proposal should be no longer than 10 single-spaced pages (not including references) and should consist of an abstract, background and significance, specific aims and experimental design. **Preliminary data are not required.** If preliminary data have been obtained, then it should be included in the background materials and may be included in the oral presentation. The student may consult with anyone in the course of preparing the proposal, but the written document must represent the student's own work. The mentor may aid in the development of specific aims and construction of a topical outline for the dissertation proposal. The mentor also may direct the student to relevant literature and may edit an initial draft. However, the mentor should not act as co-author. The research proposal will be judged on standard criteria, including, but not limited to, the student's grasp of the field, significance of the proposed work, originality and depth of thought and the feasibility of the experimental approach.

*\*Additional information on the NRSA/F31 application can be found at <http://grants.nih.gov/grants/guide/pa-files/PA-11-111.html>*

The Qualifying Exam Part II must be completed by **June 1 of the second year of full-time study**. Students must adhere to the following deadlines when preparing for the Qualifying Exam Part II:

**April 1** – Notify Department Office of the date of the oral defense by submitting the QEII Oral Defense Scheduling Form.

**Two weeks before Defense Date** – The student will distribute to all members of the dissertation committee and the Department Office with an electronic version of the written proposal.

**June 1** – The oral defense must be held **no later than June 1** of the second year of study.

The Department Office will provide the dissertation committee chair with course grades, laboratory rotation evaluations, and Qualifying Exam Part I results to review with the committee prior to the Qualifying Exam Part II oral defense. At the oral defense, the student will answer questions on the proposal and on related topics, focusing on (but not restricted to) the student's program area.

The Dissertation Committee will provide a grade of Pass, Conditional Pass, or Fail. The student must pass the exam by a majority vote of the Committee. If the student does not satisfactorily complete this part of the exam, the Dissertation Committee will make appropriate recommendations to the Graduate Academic Committee, which may include modifying the proposal and re-taking the exam, completing remedial course work, or dismissal from the program. The date and results of the exam will be communicated by the Dissertation Committee Chair to the Graduate Academic Committee and the Department Chairperson. If the student receives a Conditional Pass on the exam, the conditions must be met within three months or the student will receive a grade of Fail. If the student receives a grade of Fail, the exam may be re-taken once, and must be completed within three months.

All students are strongly encouraged to submit proposals for pre-doctoral training awards following completion of the Qualifying Exam Part II.

### **DISSERTATION RESEARCH AND ANNUAL REVIEWS**

The Dissertation Committee will meet regularly with the student throughout the course of his/her dissertation research to evaluate progress and advise. It is the responsibility of the student, along with his/her Dissertation Committee Chair to ensure that these periodic reviews are scheduled every 9 to 12 months.

The Department requires that students provide a 4-5 page summary of their research to their Dissertation Committee one week prior to the annual committee meeting. The format of this summary should not be an outline or bullet highlights, but rather, it should be written in prose as a modified version of an NIH Progress Report\*. The report should start with a short introduction to the project, and may also include figures and/or tables that would help clarify the points made in the report.

*\* Additional information on NIH progress report guidelines can be found at <http://grants.nih.gov/grants/funding/2590/phs2590.pdf>*

The student's thesis/dissertation committee should evaluate the content and structure of the written summary along with their evaluation of the student's research progress. A copy of this summary must be appended to the annual report, along with the signature form and the mentor's summary of progress/meeting discussion, which is submitted to the

Graduate Academic Committee after each meeting. These reports will become part of the student's academic file.

## **DISSERTATION DEFENSE AND SUBMISSION OF WRITTEN DISSERTATION**

The Dissertation Committee also is responsible for evaluating and accepting the final written dissertation and conducting the student's oral dissertation defense. However, it is the student's responsibility to ensure that the final document submitted to the University is prepared according to department and University guidelines (visit <http://www.albany.edu/gradstudies/degreecomp/> for information on University guidelines for submission of the dissertation).

Part of the evaluative process is determination of whether the student has produced a body of work which is publishable. As a guide, doctoral students in the Department of Biomedical Sciences typically publish three peer-reviewed publications based on their dissertation research, two of which are first-authored, by the end of their tenure in the program. Acceptance of the dissertation will be by majority vote of the Dissertation Committee, and is subject to the approval of the Department Chair and the Graduate Office.

Students should note the following deadlines for submission of the final dissertation document to the Office of Graduate Studies:

December 1 – Fall Graduation

May 1 – Spring Graduation

August 1 – Summer Graduation

In order to meet these deadlines, the dissertation defense and oral presentation should be scheduled at least two (2) weeks prior to the submission date specified above. The student must notify the BMS Department Office **at least three weeks before** the scheduled oral defense by submitting the Thesis/Dissertation Seminar and Defense Scheduling Form and providing the date, time, location, and title of presentation.

Following successful completion of the defense, the Dissertation Transmittal form must be signed by the dissertation committee and submitted to the BMS Department Office. The Department will then complete the Recommendation for Conferral of Degree and submit both forms directly to the Office of Graduate Studies, verifying that all requirements for successful completion of the doctoral degree have been fulfilled.

## Program of Study - Immunology and Infectious Diseases Track

<b>Department Requirements ( 8 minimum to 11 maximum credits)</b>	<b>Credits</b>	<b>Grade</b>	<b>Semester Offered / Semester Taken</b>
BMS 590: Laboratory Rotations	3		Fall – Year 1
BMS 665: QEI Journal Club	1		Spring - Year 1
BMS 665: Journal Club	0-3		Fall/Spring every year starting Year 2
BMS 670: Responsible Conduct of Research	1		Fall or Spring
BMS 601: Introduction to Biomedical Sciences	3		Spring – Year 2
<b>Track Requirements (10 credits)</b>			
BMS 500: Molecular Cell Biology	4		Fall - Year 1
BMS 502: Macromolecular Structure & Function	4		Fall - Year 1
BMS 506: Immunology	2		Spring – Year 1
<b>One of the following courses is required (3 credits)</b>			
BMS 514: Molecular and Cellular Immunology	3		Even Fall
BMS 610: Microbial Pathogenesis	3		Odd Spring
<b>Electives (6-9 credits)</b>			
<b>Total course credits required = 30</b>			
PhD Research Credits (30 total required - combined BMS 898 and BMS 899)			
Research Tool	0		

Mentor Approval Form. Date submitted: \_\_\_\_\_

QE I: End of first year. Date: \_\_\_\_\_

Dissertation Committee Formed. Date: \_\_\_\_\_

QE II: End of second year. Date: \_\_\_\_\_

Research Tool Completed. Date: \_\_\_\_\_

Candidacy: Date: \_\_\_\_\_

### Program of Study - Molecular Genetics Track

<b>Department Requirements (8 minimum to 11 maximum credits)</b>	<b>Credits</b>	<b>Grade</b>	<b>Semester Offered / Semester Taken</b>
BMS 590: Laboratory Rotations	3		Fall – Year 1
BMS 665: QEI Journal Club	1		Spring - Year 1
BMS 665: Journal Club	0-3		Fall/Spring every year starting Year 2
BMS 670: Responsible Conduct of Research	1		Fall or Spring
BMS 601: Introduction to Biomedical Sciences	3		Spring – Year 2
<b>Track Requirements (8 credits)</b>			
BMS 500: Molecular Cell Biology	4		Fall - Year 1
BMS 502: Macromolecular Structure & Function	4		Fall - Year 1
<b>Electives (11-14 credits)</b>			
<b>Total course credits required = 30</b>			
PhD Research Credits ( <b>30</b> total required - combined BMS 898 and BMS 899)			
Research Tool	0		

Mentor Approval Form. Date submitted: \_\_\_\_\_

QE I: End of first year. Date: \_\_\_\_\_

Dissertation Committee Formed. Date: \_\_\_\_\_

QE II: End of second year. Date: \_\_\_\_\_

Candidacy: Date: \_\_\_\_\_

## Program of Study - Neuroscience Track

Department Requirements (8 minimum to 11 maximum credits)	Credits	Grade	Semester Offered / Semester Taken
BMS 590: Laboratory Rotations	3		Fall – Year 1
BMS 665: QEI Journal Club	1		Spring - Year 1
BMS 665: Journal Club	0-3		Fall/Spring every year starting Year 2
BMS 670: Responsible Conduct of Research	1		Fall or Spring
BMS 601: Introduction to Biomedical Sciences	3		Spring – Year 2
<b>Track Requirements (14 credits)</b>			
BMS 500: Molecular Cell Biology	4		Fall - Year 1
BMS 502: Macromolecular Structure & Function	4		Fall - Year 1
BMS 604: Cellular and Molecular Neuroscience	3		Spring
BMS 612: Neuroanatomy and Nervous System Disorders	3		Fall
<b>Electives (5-8 credits)</b>			
<b>Total course credits required = 30</b>			
PhD Research Credits (30 total required - combined BMS 898 and BMS 899)			
Research Tool	0		

Mentor Approval Form. Date submitted: \_\_\_\_\_

QE I: End of first year. Date: \_\_\_\_\_

Dissertation Committee Formed. Date: \_\_\_\_\_

QE II: End of second year. Date: \_\_\_\_\_

Research Tool Completed. Date: \_\_\_\_\_

Candidacy: Date: \_\_\_\_\_

## Program of Study - Structural and Cell Biology Track

Department Requirements (8 minimum to 11 maximum credits)	Credits	Grade	Semester Offered / Semester Taken
BMS 590: Laboratory Rotations	3		Fall – Year 1
BMS 665: QEI Journal Club	1		Spring - Year 1
BMS 665: Journal Club	0-3		Fall/Spring every year starting Year 2
BMS 670: Responsible Conduct of Research	1		Fall or Spring
BMS 601: Introduction to Biomedical Sciences	3		Spring – Year 2
<b>Track Requirements (8 credits)</b>			
BMS 500: Molecular Cell Biology	4		Fall - Year 1
BMS 502: Macromolecular Structure & Function	4		Fall - Year 1
<b>Electives (11-14 credits)</b>			
<b>Total course credits required = 30</b>			
PhD Research Credits (30 total required - combined BMS 898 and BMS 899)

## Program of Study – Biodefense and Emerging Infectious Disease Training Program

Department Requirements (8 minimum to 11 maximum credits)	Credits	Grade	Semester Offered / Semester Taken
BMS 590: Laboratory Rotations	3		Fall – Year 1
BMS 665: QEI Journal Club	1		Spring - Year 1
BMS 665: Journal Club	0-3		Fall/Spring every year starting Year 2
BMS 670: Responsible Conduct of Research	1		Fall or Spring
EPI 501: Principles and Methods of Epidemiology (satisfies BMS 601 requirement)	3		Fall – Year 2
<b>Program Requirements (26 credits)</b>			
BMS 500: Molecular Cell Biology	4		Fall - Year 1
BMS 502: Macromolecular Structure & Function	4		Fall - Year 1
BMS 506: Introduction to Immunology	2		Spring - Year 1
BMS 555: Biodefense Sciences	1		
BMS 556: Biodefense Laboratory	1		
BMS 557: Emerging Infectious Disease	1		Spring - Year 1
BMS 514: Cellular and Molecular Immunology	3		Even Fall
BMS 553: Virology	4		Odd Fall
BMS 610: Microbial Pathogenesis	3		Odd Spring
BMS 632: Molecular and Cellular Prokaryotes	3		Even Spring
<b>One of the following courses is required (3 credits)</b>			
BMS 552: Medical Entomology	3		Even Spring
EPI 605: Epidemiology of Infectious Disease	3		
<b>Total course credits required = 37</b>			
PhD Research Credits (30 total required - combined BMS 898 and BMS 899)			
Research Tool	0
